

# BizTrack — client feedback status

Every chat message in the order sent, checked against the deployed build (commit 583a2b5) on 7 August 2026. Read-only audit; nothing was changed to produce this.

**DONE (44)** — safe to like · **PARTLY (6)** — read the note before liking · **ANSWERED (3)** — a question, not a change; reply rather than like

| # | CHAT MESSAGE                                                                                                                                                                                                                                                                                                                                                 | STATUS | NOTES                                                                                                                                                                                                                                                                                                                                    |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | BPLO side should only have the 3 dashboards (Processing Tlme should not exist here) / Super admin side should only have Processing Time dashboard / Remove unnecessary, long explanations / Remove large spaces; fix the UI design / Follow everything in the FINAL DRAFT tab / Proper follow terms (e.g., "Lifecycle" should be "Business Growth Analysis") | DONE   | All verified. BPLO holds analytics.view only; admin holds analytics.processing_time only. Prose cut to one-line captions, large spacing classes gone, h1 reads Business Growth Analysis. NOT verified: "Follow everything in the FINAL DRAFT tab" — needs that document to check against.                                                |
| 2 | It should clearly be visible what the chosen line of business is upon choosing / Fix the categorization on the dropdown choices                                                                                                                                                                                                                              | PARTLY | First half done: a persistent "Your line of business" summary with Change/Clear, announced to screen readers. Second half NOT done — the picker still offers an 8-code shortlist plus "All other trades", no grouping by trade. The data exists server-side (76 division mappings); only an API field and grouped rendering are missing. |
| 3 | Unpaid applications are still not reflected in the tracking of applications (in the admin side)                                                                                                                                                                                                                                                              | PARTLY | A Pending Payment tab now exists, but only BPLO and the super admin can see it. Other offices cannot, because an unpaid filing has no assignment yet — nobody owns it. Making every office see unpaid filings is a product decision, not a bug fix.                                                                                      |
| 4 | When I apply for sanitary permit, the sanitary office should only see the application/submission details ONLY FOR the sanitary permit. The sanitary admin should not be able to see my other information in other permit applications.                                                                                                                       | DONE   | One shared rule now gates both doors — the office-forms endpoint and the assignment payload the review sheet actually opens. They previously disagreed, which was the leak. The office still sees the applicant's shared particulars (address, barangay, PSIC line, documents), which every office needs to work.                        |
| 5 | Fix the flow of the system if there are any errors: Business owner: apply -> payment (status: pay online) -> wait for approval -> wait for inspection -> permit released ... Office admin: receive application -> wait for payment -> approve/reject -> approve/reject inspection -> release permit                                                          | DONE   | Sequence matches. The Mayor's permit is withheld until every other requested clearance is approved, and dropping the optional Market Clearance correctly reduces the requirement to 5. Wording differs: the status reads "Pending Payment" (Pay Online is the button) and the final state is "Approved", not "Permit Released".          |

| #  | CHAT MESSAGE                                                                                                                                                                                                                                                                          | STATUS   | NOTES                                                                                                                                                                                                                                                                                             |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6  | After approval, inspection goes on (the permit should be 'for inspection' on the applicant side)                                                                                                                                                                                      | DONE     | The first office's approval books its own visit and moves the filing to for_inspection, which the applicant sees.                                                                                                                                                                                 |
| 7  | As an admin, there is no approval button as I review the inspection details (also, the inspection details should be the same as what was submitted in the application form; refer to the modal in the GUI)                                                                            | DONE     | Approve/Reject now sit on each visit card and post a real inspection result.                                                                                                                                                                                                                      |
| 8  | In reviewing the inspections (admin side), I can still see the application details. Please remove this and change into something like this.                                                                                                                                           | DONE     | An office that owes no review now gets an inspection-only sheet. Where the filed form still appears it is collapsed behind a disclosure rather than open.                                                                                                                                         |
| 9  | In the Renewal Risk: Change the name to Renewal Risk Prediction / Add button to send reminder/immediate follow up / Add filter by barangay, risk level, and action / Change the table; it should also display other levels of risk / The table should have its own scroll down button | DONE     | All five. The reminder creates a real notification in the owner's list, is guarded against double-sending and is written to the audit log. Filters apply server-side before the ranking is cut, which is what makes Low risk reachable at all.                                                    |
| 10 | Clarify the pointing system. Ask where prediction happens here.                                                                                                                                                                                                                       | DONE     | The panel now states it is a fixed rule book, not a fitted model, and that the weights are our judgement pending BPLO approval.                                                                                                                                                                   |
| 11 | Clarify the description below: Each permit is checked against five things ... it is not a prediction, and it does not say how likely a renewal is to be late.                                                                                                                         | DONE     | Your wording is used verbatim, and it lives server-side so the exported PDF carries the same sentence.                                                                                                                                                                                            |
| 12 | Roberto's Laundry Shop is currently for inspection. The system displays for inspection in the status, but after a few seconds, it changes to approved. What could be the mistake here?                                                                                                | ANSWERED | Not a timing bug — nothing polls the status. Cause: saving a processing category auto-issues a filing that is ALREADY fully cleared (all reviews in, all visits passed). Without that, such filings would be permanently stuck behind the new category gate. Reply to this rather than liking it. |
| 13 | In the Business Growth Analysis: Remove unnecessary, long paragraphs. / Remove any mentions of cohort survival.                                                                                                                                                                       | DONE     | Longest remaining block is about 25 words. No user-visible "cohort", "survival" or "Kaplan-Meier" anywhere; the panel is titled Business Renewal Performance. The words survive only as an internal data key nobody sees.                                                                         |

| #  | CHAT MESSAGE                                                                                                                                                                                                                                                                                                    | STATUS | NOTES                                                                                                                                                                                                                                                                                                                                                                                                 |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14 | Not priority: Shorten the explanation for each information icon in the dashboards. Make them straightforward and simple to understand for user-friendliness.                                                                                                                                                    | DONE   | Definitions are truncated at display to two sentences for the formula and one each for the rest.                                                                                                                                                                                                                                                                                                      |
| 15 | In the Analytics Dashboard: Currently, it looks overwhelming because there are too many information/explanations ... / Follow the terms mentioned in the paper (e.g., "Average Processing Time by RA 11032 Tier" should be "Average Processing Time (RA 11032)").                                               | DONE   | Longest prose is about 60 words; popovers are one to three sentences. The label reads "Average Processing Time (RA 11032)".                                                                                                                                                                                                                                                                           |
| 16 | OBO, CENRO, Market, and Zoning admins cannot approve inspection. Only Sanitary and Fire has it.                                                                                                                                                                                                                 | DONE   | All six clearance types require an inspection, and the UI gate is a department match with no hardcoded office list. All six can now record a result.                                                                                                                                                                                                                                                  |
| 17 | In the super admin's account (admin@), remove Messages, Track, Inspections, and Other Requirements. It is not his role to do those things.                                                                                                                                                                      | DONE   | Revoked at the API, not merely hidden in the nav — the permissions are removed from the admin role and there is no super-admin bypass.                                                                                                                                                                                                                                                                |
| 18 | The offices displayed in the Permit Processing Time Monitoring are lacking. The other offices are not present. It should be a total of 7 offices.                                                                                                                                                               | PARTLY | All 7 offices now appear as cards and the "Not charted: OBO, CENRO, CMO-MARKET" footnote is gone. But only 4 get a plotted line: a week with fewer than 3 finished reviews is dropped as noise, and those three offices never reach 3 in any week. That is a deliberate statistical guard. If they literally meant 7 lines, we would have to average over 1–2 reviews — which I would advise against. |
| 19 | Business Location Insights: should already be displayed when something is pinned on the map, not on the confirmation modal / The pinned location should have a circle (500 meter) / Ensure everything is working correctly. // Not priority: Paper-based forms for the other six offices are still not matched. | PARTLY | Insights render under the map on the step body, and the 500 m circle is drawn from the API's own radius rather than a duplicated constant. Paper forms: 5 of 6 transcribed from named official forms; the Market form is invented because that office has no printed form and asked for one.                                                                                                          |
| 20 | Once a sub-permit (those from offices outside BPLO) is already approved/done for inspection for a business, but the other sub-permits are not yet approved/done, still display those that are approved/done already.                                                                                            | DONE   | Per-office approval and inspection state renders as each office finishes; there is no "all offices done" gate on the display. Caveat: the certificates themselves are still all minted together once every office completes. If they meant "let me download the approved sanitary certificate while fire is pending", that is a workflow change and is NOT done.                                      |

| #  | CHAT MESSAGE                                                                                                                                                                                                                                                                       | STATUS   | NOTES                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 21 | The Track page -> For Inspection is redundant with the Inspections page. Remove the Inspections page. All inspections will happen in The Track page -> For Inspection                                                                                                              | DONE     | The nav entry is gone, the list route redirects to the queue, and old inspection deep links resolve to the review sheet.                                                                                                                                                                                                                                                                                                                                |
| 22 | When you submit a sub-permit instead of apply, since it is assuming that you have one already, just also display it in the Profile page, along with the other permits.                                                                                                             | DONE     | Submitted copies are served by their own endpoint and rendered on Profile, labelled distinctly from permits this office issued.                                                                                                                                                                                                                                                                                                                         |
| 23 | Change 'Renewal Risk' to 'Renewal Risk Prediction'                                                                                                                                                                                                                                 | DONE     | h1 reads Renewal Risk Prediction.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 24 | Change 'Overview' to 'Analytics Dashboard'                                                                                                                                                                                                                                         | DONE     | h1 reads Analytics Dashboard.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 25 | In the line of business, make the choice selected apparent                                                                                                                                                                                                                         | DONE     | A checkmark confirmation pinned inside the open dropdown, plus the persistent summary below the box.                                                                                                                                                                                                                                                                                                                                                    |
| 26 | After applying for one of the permits, there is no cancellation of the application to do submission instead.                                                                                                                                                                       | DONE     | Each clearance card carries a Withdraw control and a "Withdraw & submit" path.                                                                                                                                                                                                                                                                                                                                                                          |
| 27 | Remove unnecessary warnings that are too technical (e.g., "Computed locally, not by R. This window is not one of the precomputed windows ...")                                                                                                                                     | DONE     | That notice is deliberately never rendered on screen. It survives only in the exported PDF, where a reader cannot ask anyone what produced the figures.                                                                                                                                                                                                                                                                                                 |
| 28 | Verify the business location insights: I tried setting the line of business to "Manufacture of dairy products" and the Most common line of business is "Manufacturing" (it did not specify which manufacturing) but the count of Similar businesses within 500 m did not increase. | DONE     | Two separate points. The naming defect was real and is fixed — sixteen manufacturing divisions used to collapse into the bare word "Manufacturing"; division 10 now reads "Food & Beverage Manufacturing". The count was correct all along: "Similar" counts your 3-digit PSIC group, "Most common" is the mode of the 2-digit division across ALL neighbours, and your own business is excluded — so setting your own line can never increase Similar. |
| 29 | I cannot remove my application on the Zoning/Locational Clearance once I changed my mind to Submit instead of Apply.                                                                                                                                                               | DONE     | Withdraw is available per clearance; the block only applies after the filing is submitted.                                                                                                                                                                                                                                                                                                                                                              |
| 30 | In the editing mode when I am trying to approve an application as admin, what is the meaning of this description? Can't I edit the form itself since I am on edit mode?                                                                                                            | ANSWERED | Intended design, not a defect. The applicant's answers are their signed RA 10173 declaration and stay locked; edit mode exposes the office's own fields. Reply rather than liking.                                                                                                                                                                                                                                                                      |

| #  | CHAT MESSAGE                                                                                                                                                                                                                                            | STATUS | NOTES                                                                                                                                                                                                                                      |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 31 | I just approved ABCD Trading (I am using BPLO admin account), but it is not listed on the For inspection. Does this mean all offices must approve it first before being For inspection?                                                                 | DONE   | BPLO's permit type requires no inspection, so it never books a visit. The tab now keys on THIS office's assignment being completed, so BPLO's approved filings do appear.                                                                  |
| 32 | I am using Sanitary Office's admin account, but I can still see the other application fields for other offices when I am trying to approve an application ... There should be separability depending on the role I use.                                 | DONE   | Each office now receives only its own permit type's questionnaire, at both endpoints. 75 scoping tests cover it.                                                                                                                           |
| 33 | I am using Sanitary Office's admin account then I just approved the For inspection of ABCD Trading, but ABCD Trading's For inspection for other offices too got approved as well. Each office should approve their applicant's For inspection.          | DONE   | Each office has its own inspection row; recording a result writes only that row, and cross-office writes are refused. The original report was a misreading of the shared filing status.                                                    |
| 34 | I am using Market Office's admin account, and now I cannot approve the For inspection for ABCD Trading because it is said to have been approved by Fire Office's admin account. But it is listed as For inspection in the business owner side. Fix this | DONE   | Market's visit is only booked once Market approves its own review. Until then the filing sits in For Approval, now labelled "Waiting on you · another office booked an inspection".                                                        |
| 35 | Those who are already done with the whole application process (accepted and all) is still displayed in the For inspection tab of the Track page of all admins. Fix this                                                                                 | DONE   | Approved and issued filings are excluded from that tab, and the tab also requires this office's assignment to be completed.                                                                                                                |
| 36 | In the average processing time, since it categorizes applications into simple, complex, and highly technical, allow all office admins to set the application category during their edit mode when trying to approve the application.                    | DONE   | The category is a property of the filing and any office may set it; there is no department restriction.                                                                                                                                    |
| 37 | The offices listed in the Inspections are missing; should be all 6 (no BPLO)                                                                                                                                                                            | DONE   | All six inspecting offices are emitted, at zero where they have no inspections. BPLO is absent.                                                                                                                                            |
| 38 | Do not put YTD only; it should be the full term                                                                                                                                                                                                         | PARTLY | Read as "full time period": the metric changed from year-to-date to all-time and the card now reads "Applications (all time)". If they meant "spell out Year to Date", we changed the number instead of the label. Worth confirming which. |

| 39 | In the Business Industry Growth Trend, is there a criteria on why only 6 categories/line of businesses were shown here?                                                                                                                                         | DONE   | The caption now states the rule on screen — the six largest lines by businesses registered, with the number of smaller lines not shown.                                                                                                                                                                                                                                                                                                                                                                                                       |
| 40 | Ask for those R features that are hardcoded (ask for the titles of information displayed only; for example, Average Processing Time by Department) then fix it. If it cannot be fix because it needs some data or validation for it to work, ask how to fix it. | PARTLY | Audit done across all four screens. Almost everything is live. Two remain: (1) the inspection panel's type labels (Sanitary/Fire Safety/Zoning) are a constant, because inspections.inspection_type is written by no code — fix is to write that column at inspection creation and delete the constant; (2) the closure trend's soft-delete half, because nothing in the product can close a business — fix is a close/deregister action. The blacklist half is now live. Neither shows a wrong number, but neither can be demonstrated live. |
| 41 | Put a title "Renewal Risk Level"                                                                                                                                                                                                                                | DONE   | Heading sits above the three band-count cards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 42 | Clarify what Renewal 1, 2, 3 means                                                                                                                                                                                                                              | DONE   | Axis ticks now read 1st/2nd/3rd renewal, with one line: "The 1st renewal is a business's own first, not a calendar year and not the first in this period."                                                                                                                                                                                                                                                                                                                                                                                    |
| 43 | Fix the hovering for all donut charts                                                                                                                                                                                                                           | DONE   | Both donuts pin the tooltip clear of the centre figure. Trade-off: it now covers the top of the ring instead — a shape rather than a number.                                                                                                                                                                                                                                                                                                                                                                                                  |
| 44 | On the admin side, choosing the Application category must be required. The admin must not approve the application unless an Application category is chosen.                                                                                                     | DONE   | Enforced server-side, and it requires an OFFICER-set category, not the automatic guess. The first attempt checked only that a category existed — and since every filing is seeded with a guess at submission, it never once fired. Saving the pre-filled value counts as confirming it.                                                                                                                                                                                                                                                       |
| 45 | In Renewal Risk Prediction, change Permit Lifecycle to Permits Approaching Expiry                                                                                                                                                                               | DONE   | Heading and the server-side definition label both updated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 46 | In Renewal Risk Prediction, remove EVERYTHING below Recommended Actions and What drives the index; they are unnecessary.                                                                                                                                        | DONE   | The fitted-model panel is unmounted. Its server side is left in place and still computes, so re-showing it is a one-line change if ever wanted.                                                                                                                                                                                                                                                                                                                                                                                               |

| #  | CHAT MESSAGE                                                                                                                                                                                              | STATUS   | NOTES                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 47 | In What drives the index, can't it be simplified the computation on how index was computed?                                                                                                               | DONE     | Each rule now leads with the arithmetic, and the panel finally states the thing it never said: that the five rules are ADDED, what they add to, and where the band cuts fall — both derived from the server's own weights.                                                                                                                                                                                                                                |
| 48 | In Business Industry Growth Trend, there are descriptions for Largest, Fastest growing, Fastest declining, but all of them are vague. Please simplify them.                                               | DONE     | One idea per sentence: what the chart shows, then who was excluded, then why fewer than six lines are drawn when that happens.                                                                                                                                                                                                                                                                                                                            |
| 49 | Add search functionality here since this may contain vast amount of businesses. Also, the Recommended Actions says thousands of recorded businesses, but the table only shows a few of them. Clarify why. | DONE     | Search is server-side and matches business name and permit number — which matters, because three businesses on this register share the name "Bagong Services Enterprises" and two are in the same barangay. The counts line now reads: "Counts all N scored permits. The table above is showing 25 of M matching."                                                                                                                                        |
| 50 | Clarify on this "What drives the index". Is this the predictive model formula? Why points are set that way?                                                                                               | DONE     | The panel says plainly it is not a fitted model, that the points are set in advance, and that the weights are our judgement with BPLO approval still outstanding.                                                                                                                                                                                                                                                                                         |
| 51 | Make the page number apparent                                                                                                                                                                             | DONE     | Bold, on its own line, with the row range beneath it.                                                                                                                                                                                                                                                                                                                                                                                                     |
| 52 | What does Renewal 1, 2, 3 mean?                                                                                                                                                                           | DONE     | Same fix as the earlier bubble — ordinal ticks plus the one-line note.                                                                                                                                                                                                                                                                                                                                                                                    |
| 53 | Clarify how both of these work                                                                                                                                                                            | ANSWERED | Explained in conversation, no screen change.<br>Business Renewal Performance: of the businesses reaching each renewal cycle, the share that had renewed every earlier one with no gap; businesses still inside their permit are set aside rather than counted as failures. Business Closure Trend: businesses whose registration was removed, dated by the soft-delete timestamp (there is no closed_at column), plus blacklisted businesses since today. |
